To our distinguished visitors:

We are honored to have you worship with us! We'd love to get to know you better, share our mission and vision as a church and explore how you can become a part of our family.

If you, any member of your family or friends you know of are interested in becoming a member of the Liberty City Church of Christ, please contact any member of the Liberty City Church of Christ and they will direct your request to our Evangelism Ministry Leaders or you may call our Evangelist directly, Eric W. Doss (813) 451-0121.

## The Structure Of The Heart:

Submitted by: **Beatrice Ramsey**

*The heart is cone – shaped, a strong muscular organ. About the size of your clinched fist. The heart is slightly tilted to the left located behind the rib cages and breast bone. The left side is stronger and larger, because this area is responsible for pumping blood to all parts of the body.*

*The heart is divided into four chambers. The upper chambers – the right Atrium and the left Atrium. The lower chambers – the right Ventricular and the left Ventricular. The upper chambers of the heart are smaller, receiving the blood at a lower rate. The lower chambers of the heart are larger, discharging at a higher rate. However the left lower Ventricular is stronger with a greater force pumping the blood out of the heart.*

*The has four valves which separate the heart chambers, using a one system. One valve lies between each Atrium and Ventricular. It is important to remember: when the upper chambers are open to receive de-oxygenated blood inside the heart, all valves to the ventricular are closed to prevent blood back flow. Same procedure occurs when the valves of the upper chambers closes then immediately the valves of the lower chambers opens. The difference is when the right ventricular valve is open, de-oxygenated blood is force out of the heart to the lungs for recycling. This same blood is now free of all impurities with clean oxygen blood to be released into the body.*

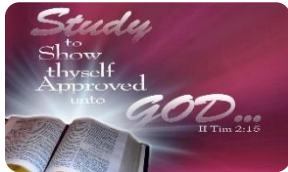

### DID YOU KNOW :

*The heart is the first functional organ to develop and starts to beat and pump blood at about three weeks into embryogenesis. Before the fifth week, there is an opening in the fetal heart known as the foramen ovale. This allows blood in the fetal heart to pass directly from the right atrium to the left atrium repeatedly. The fetus heart rate begins to beat at a rate near the mother's heart rate, about 75 – 80 beats per minute. Around the 7<sup>th</sup> - 8<sup>th</sup> weeks, fetus heart rate accelerates and reaches a peak of 165 – 185 per minute. After the 9<sup>th</sup> week heart rates slows down 145 – 125 until birth.*
