Grown and Evangelizing (Part 12)

Submitted by: Eric W. Doss

Application Question: In what ways have you experienced spiritual growth by consistently sharing your faith and serving? In what ways have you experienced spiritual stagnation for not sharing and not serving?

A Mature Witness Should Expect Attack and Respond to It in a Godly Manner

It is true that some preach Christ out of envy and rivalry, but others out of goodwill... The former preached Christ out of selfish ambition, not sincerely, supposing that they can stir up trouble for me while I am in chains... But what does it matter? The important thing is that in every way, whether from false motives or true, Christ is preached. And because of this I rejoice. Yes, and I will continue to rejoice (**Philippians 1:15, 17-18**).

The next characteristic of a mature witness that we can discern from Paul's account of his ministry in Rome is that a mature witness should expect attacks and respond to it in a godly manner. It should be noticed that Paul was not describing attacks from those in the world or even from false teachers. The attacks Paul shared about were from other peers in the gospel. They had an orthodox faith—they taught Christ. However, they taught Christ out of envy and rivalry.

Prayer Request

Confess your faults one to another, and pray one for another, that ye may be healed. The effectual fervent prayer of a righteous man availeth much. **James 5:16**

“COVID-19 symptoms and the Omicron variant: What the latest studies show” (Pt.5)

Submitted by: Beatrice Ramsey

However, the symptom is not new — some nine in 10 patients in one report from Wuhan, China from February 2020 listed the symptom.

An analysis of cases in London last month “found no clear difference in the symptom profile of Delta and Omicron, with only 50% of people experiencing the classic three symptoms of fever, cough, or loss of sense of smell or taste,” said a post from the ZOE COVID Study, which has tracked trends in previous variants too.

More data on the topic are expected in the coming weeks.

Since June, monthly government surveys in the U.K. have steadily tracked around 30% of people with positive infections reporting loss of taste or smell, and around 40% reporting cough or fatigue. A new round of survey data for December, when the Omicron variant began to drive a record spike in cases there, is scheduled to be released later this month.

New clues could also come from ongoing studies investigating Omicron's effects on animals and tissue samples challenged with the virus in labs, which can control for factors like immunity or underlying conditions that might muddy data on the variant's effects in humans.
