### A Mature Witness Should Expect Attack and Respond to It in a Godly Manner

When Paul was imprisoned in Rome, many congregations and ministers started to make pilgrimages to hear him preach and teach at his rented home which may have caused a spirit of rivalry in other ministers. The word "envy" has the connotation of jealousy—they wanted the prominence and favor that God gave Paul's ministry, and they also wanted to see him fail. They were hoping to stir up trouble for Paul as they preached to their churches.

Maybe they were saying his imprisonment meant that he was not really an apostle or a godly man or that he was in sin. We saw this mentality with Job's friends. They had an early form of the "prosperity gospel." The fact that Job was sick and lost his wealth meant to them that he had sinned in some way. They believed this because for them, it was never God's will to allow trials in the life of someone who was righteous. Possibly, it was this form of false doctrine that was used to attack Paul and his ministry in prison.

Let us understand that if we are going to be faithful witnesses for Christ, this will stir up animosity towards us. "In fact, everyone who wants to live a godly life in Christ Jesus will be persecuted" (2 Timothy 3:12).

## Prayer Request

Confess your faults one to another, and pray one for another, that ye may be healed. The effectual fervent prayer of a righteous man availeth much. **James 5:16**

“COVID-19 symptoms and the Omicron variant: What the latest studies show” (Pt. 6)

Submitted by: Beatrice Ramsey

New clues could also come from ongoing studies investigating Omicron's effects on animals and tissue samples challenged with the virus in labs, which can control for factors like immunity or underlying conditions that might muddy data on the variant's effects in humans.

"NIH-funded studies that are ongoing right now in both mouse and hamsters confirm the lesser virulence in the animal model. And studies here at the Vaccine Research Center at NIH, in the nonhuman primate model, are ongoing," Dr. Anthony Fauci, the president's chief medical adviser, told reporters last week.

Fauci pointed to some preprints, which have not yet completed peer review, studying the virus in mice and hamsters that found signs that Omicron may spread poorly compared to Delta in the lungs. Similar findings from researchers in Hong Kong suggest Omicron can spread faster than Delta in tissue from the bronchus (the airway that leads to the lungs) but slower in the lungs.

"Seemingly subtle change in viral biology may have significant real-world effects on the nature of the disease that results from infection," says the University of Glasgow's Brian Willett.
