We are honored to have you worship with us! We'd love to get to know you better, share our mission and vision as a church and explore how you can become a part of our family.

If you, any member of your family or friends you know of are interested in becoming a member of the Liberty City Church of Christ, please contact any member of the Liberty City Church of Christ and they will direct your request to our Evangelism Ministry Leaders or you may call our Evangelist directly, Eric W. Diabetes Mellitus

Submitted by: Beatrice Ramsey

Do you know? Diabetes is a chronic (long-lasting) disease that affect how your body turns food into energy. After you eat, carbohydrates (candy, cakes, pies, and fresh sweet fruits) the body breaks down the carbs into glucose, a sugar that is the body's primary source of energy. The glucose then enters the blood stream. The pancreas responds by producing insulin, allowing glucose to enter the body's cells to provide energy, maintaining normal cellular activities.

Diabetes is a long-lasting disease, occurring when the pancreas does not produce enough insulin or when the body does not use insulin correctly. In both cases, there is a lot of glucose flowing around in the body. Emergency treatments are required, due to high levels of glucose. Insulin injections will be regulated by your doctor or hospitalized for more intense treatments for extremely high levels of glucose.

Did you know, there are three types of diabetes?

Type 1 – is cause by an autoimmune reaction, where the body attacks itself by mistake. This reaction stops your body from making insulin. Approximately 5 – 10 % of the people with diabetes, have type 1. If you have type 1 diabetes, you will need to take insulin every day to survive. Type 2 – your body does not use insulin well and cannot keep blood sugar at normal levels. This type is mainly diet control and may or may not require oral medication. Type 2 can be prevented or delayed with healthy lifestyle changes – losing excessive weight, staying active and eating healthy. Another type is Gestational Diabetes, develops in pregnancy and your baby could be at a high risk for health problems. After the baby is born, it could go away or increase your risk for type 2 later in live.
