Grown and Evangelizing (Part 27)

Submitted by: Eric W. Doss

Application Question: How can you develop a more gospel-centered life? In what ways is God calling you to make your focus evangelism and missions?

Conclusion

What are characteristics of a mature witness for Christ? What are characteristics of a gospel pioneer—someone who advances the gospel into new territory so others may follow? We see these characteristics in Paul and his gospel ministry in Rome.

1. A Mature Witness Shares the Gospel in Every Circumstance
2. A Mature Witness Is Courageous and Fearless
3. A Mature Witness Encourages Others to Share Their Faith
4. A Mature Witness Should Expect Attack and Respond to It in a Godly Manner
5. A Mature Witness Has the Right Motives
6. A Mature Witness Is Gospel-Centered

Prayer Request

Confess your faults one to another, and pray one for another, that ye may be healed. The effectual fervent prayer of a righteous man availeth much. **James 5:16**

“Bust Common Myths and Learn Facts” (Part 7)

Submitted by: Beatrice Ramsey

8. MYTH: COVID-19 vaccines authorized for use in the United States shed or release their components.

FACT: Vaccine shedding is the release or discharge of any of the vaccine components in or outside of the body and can only occur when a vaccine contains a live weakened version of the virus.

None of the vaccines authorized for use in the U.S. contain a live virus. mRNA and viral vector vaccines are the two types of currently authorized COVID-19 vaccines available.

9. MYTH: COVID-19 vaccines can alter my DNA.

FACT: COVID-19 vaccines do not change or interact with your DNA in any way.

Both messenger RNA (mRNA) and viral vector COVID-19 vaccines work by delivering instructions (genetic material) to our cells to start building protection against the virus that causes COVID-19.

After the body produces an immune response, it discards all the vaccine ingredients just as it would discard any information that cells no longer need. This process is a part of normal body functioning.

The genetic material delivered by mRNA vaccines never enters the nucleus of your cells, which is where your DNA is kept. Viral vector COVID-19 vaccines deliver genetic material to the cell nucleus to allow our cells to build protection against COVID-19.
