"Reasons to Fall in Love with Him" (Part 4)

Because Jesus is love, He loves to give. Jesus said He gives good things to those who ask Him (**Matthew 7:11**). James went so far as to say that every good gift finds its source in Him (**James 1:17**). Since God is love, we can expect Him to give of Himself.

Knowing the God of love can help to make us more loving and giving persons. Not only will getting to know Him more intimately cause us to become more like Him, but resting secure in the assurance that He loves us will keep us from making demands of others and free us to reach out unselfishly and minister to them for their benefit alone. It is vitally important that we understand how much God loves us.

2. God's Love Is Sacrificial

Not only does God's love motivate Him to give, but it motivates Him to give when it costs Him dearly. That too is different from our love. We hesitate to do anything for others that will cost us too much or inconvenience us too greatly. But God's love cost Him the very best that He had—His only Son. That is the message of the greatest love text in the Bible: "For God so loved the world, that He gave His only begotten Son, that whoever believes in Him should not perish, but have eternal life" (**John 3:16**). God's giving His Son involved more than merely allowing Him to leave Heaven's glory and enter earth's history. It meant allowing Him to die in our place and pay the awful debt of our sins. God proved His love conclusively and irrefutably by sending His Son to the cross as an atoning sacrifice for our sins (**Romans 5:8; 1 John 4:9-10**).

Prayer Request

Confess *your* faults one to another, and pray one for another, that ye may be healed. The effectual fervent prayer of a righteous man availeth much. **James 5:16**

Sick and Shut-In

Home Bound/Hospital

“COVID-19: Aerosols Versus Respiratory Droplets Explained”

Submitted by: Beatrice Ramsey

Experts first isolated SARS-CoV2 in aerosols back in March, but the extent to which the virus spreads through the air is something that the scientific world is still evaluating. In the meantime, understanding some of the differences between respiratory droplets and aerosols is important.

The Centers for Disease Control and Prevention defines droplet transmission as occurring “when droplets containing infectious agents are propelled a short distance through the air (e.g., by coughing, sneezing, or talking) and deposited in the eyes, nose or mouth of a susceptible person.” Airborne transmission, meanwhile, is described as “dissemination of either airborne droplet nuclei (**small-particle residue [5 micrometers or smaller] of evaporated droplets containing microorganisms that remain suspended in the air for long periods of time**) or dust particles containing the infectious agent.”

These small particles, the CDC continues, “can be dispersed widely by air currents and may become inhaled by a susceptible host in the same room or over a longer distance from the source patient, depending on environmental factors.”
