"Reasons to Fall in Love with Him" (Part 11)

I read somewhere that those words were penciled on the wall of a narrow room in an asylum by a man who supposedly was demented, and they were discovered after his death. He was not demented at all. He had learned one of the most precious truths of all time, that God's love is infinite.

We can no more exhaust it than we can empty the ocean with a bucket. And we are invited to keep drawing from His inexhaustible supply. To do so will enable us to keep extending love to those around us even when our love is not returned.

5. God's Love Is Holy

When some people hear that God's love is self-giving, sacrificial, unconditional, eternal, and infinite, they get the idea that it is merely soft, sloppy sentimentality, that God is an indulgent Father who gives us everything we want and conveniently turns His head the other way when we sin. But that is not the case. Everything God does is done in the totality of His being, so His love must always be consistent with His other attributes. Since God is holy, then His love must be a holy love that encourages holiness in those loved. The evidence is overwhelming! For example, in the same context in which Paul explains that we in love were predestined unto the adoption of sons, he states God's purpose for choosing us. It is "that we should be holy and without blame before Him"

(**Ephesians 1:4**).

Prayer Request

Confess *your* faults one to another, and pray one for another, that ye may be healed. The effectual fervent prayer of a righteous man availeth much. **James 5:16**

80 Percent of Hospitalized COVID Patients Are Deficient in This Vitamin

Submitted by: Beatrice Ramsey

While the novel coronavirus has proven to be a formidable foe, scientists have nevertheless been able to gradually understand just how it affects our bodies and what we can do to improve our chances of beating the disease. Besides tackling major underlying conditions such as hypertension or diabetes, mounting research is also finding that **simple changes to your diet** could have a huge effect on how you'll fare against the virus. Now, yet another study has found that **being deficient in vitamin D** could make you more likely to be hospitalized with COVID, increasing your chances of severe illness by 80 percent. The new research out of Spain, which was published in the *Journal of Clinical Endocrinology & Metabolism*, examined 216 subjects who had been infected with the novel coronavirus and compared them with 197 healthy people in a control group.
