Understanding Heart Problems Symptoms: Part 2

Submitted by: Beatrice Ramsey

Risk factors, such as dietary restrictions of high sodium and saturated fatty fried foods, should be at the top to avoid. Due to the life-threatening consequences, they cause. **GOOD TO KNOW:** your liver work hard to remove bad cholesterol from your blood. But sometimes certain proteins can disrupt your liver's hard work. The lower you can keep your cholesterol level, less problems for your heart. Consistent high levels of cholesterol will cause plaque formation on the walls of the blood vessels. Restricting blood flow, causing the heart to beat and pump harder, to comply with the body's demand for blood supply. Keep in mind – some heart attacks happen suddenly. But many people have warning signs and symptoms hours, days or weeks in advance. The key to the previous statement, knowing heart symptoms and when to notify your doctor.

*A heart attack is a medical emergency. **Symptoms** – pain in the jaw, neck, back, legs and arms. Also swollen feet / legs, difficult breathing, choking sensation, cold sweating and dizziness. Call your doctor immediately.*
