Understanding Osteoarthritis

Osteoarthritis is inflammation of the joints. It is the most common type of arthritis, causing unwanted disability. Osteoarthritis (OA) happens when the cartilage that lines your joints for easy movements, become worn down or damaged and bones rub together causing pain and instability from loss of cartilage protection. Resulting from wear and tear of using your joints frequently, throughout your life. Contrary to the common misconception, it's not just an "old person's disease." About two third of those living with arthritis are ages 65 and under. OA can affect any of your joints, but most commonly develops in your knees, hands, hips, neck and lower back.

SYMPTOMS: Pain might hurt during or after movements. Stiffness might be most noticeable upon awakening or after being inactive. Loss of flexibility, not able to move your joints through it's full range of motion. A granting sensation, you hear a popping or crackling doing movements. Also swelling caused by soft tissue inflammation around the joint.

RISK FACTORS: Obesity, diabetes, high cholesterol, and any autoimmune disease that affect your joints. Osteoarthritis symptoms usually can be managed, but damage to joints can't be reversed. Staying active, maintaining a healthy weight and receiving certain treatments might slow progression of the disease and help improve pain and joint function.

REMEMBER: *Notify your doctor when you have frequent joint pains with decrease mobility.*

It is with heavy hearts that we announce the passing of **Sis. Anaya.**

Please keep her parents, Parker Daniels and Ashlee Hutchinson, her siblings, and a host of family and friends in your prayers during this difficult time. May

God's love, comfort, and peace surround them as they navigate this tremendous loss. **#Sweet16**

"The Lord is close to the brokenhearted and saves those who are crushed in spirit." - Psalm 34:18
