

**BLESSED
TO
SEE
ANOTHER
YEAR**

July 9th ~ Deborah Carter
July 10th ~ Don-E Holloway
July 12th ~ Alicia Mitchell
July 13th ~ John Herriott
July 17th ~ Vincent "Buck" Lee
July 18th ~ Ivenette Black
July 18th ~ Ailea Cutler
July 18th ~ Juliette Jean-Jacques
July 20th ~ Jacqueline Anfield
July 25th ~ Kandys Thomas-Johnson

A wise man once said:

"Hate has 4 letters
but so does Love.
Enemies has 7 letters
but so does Friends.
Lying has 5 letters
but so does Truth.
Cry has 3 letters
but so does Joy.
Negativity has 10 letters
but so does Positivity.

Life is 2 sided.
Choose the better side of it."

Thank You

We are glad you joined us today. We pray that you will experience God's presence as we share the wisdom found in HIS WORD.

 **LIBERTY CITY CHURCH OF CHRIST**  **Liberty City Church of Christ Miami FL**

This is the day the LORD
has made. We will rejoice
and be glad in it.

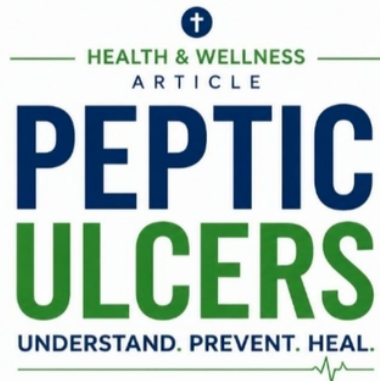

Psalm 118:24

(305)836-4555 • LCCCMAMI.ORG

Peptic ulcers are open sores on the lining of the stomach and the upper part of the small intestine. The stomach acids and other digestive juices, help create ulcers. By burning into the lining of your stomach and the beginning of the small intestine. Ulcers are also caused by infection from a bacteria or germ called H pylori (*Helicobacter Pylori*). There are two types of peptic ulcers, gastric (stomach) ulcers appear on the inside of the stomach. The duodenal (duodenum) ulcers appear on the inside of the upper part of the small intestine. One of the most common and serious complication, of untreated peptic ulcers is internal bleeding. As the ulcer eats away at the stomach or the internal lining of the duodenal, it can open an area in the blood vessel causing blood leakage. Resulting in bloody black tarry stool, or vomiting blood that looks like coffee grounds. This can develop into anemia, from blood loss resulting in fatigue, weakness and shortness of breath. *Other symptoms include:* intense abdominal pain, high fever, feeling dizzy or fullness.

GOOD TO KNOW: Healed peptic ulcers can cause interference with food movements, from the stomach to the small intestine. This condition is the results from scared tissue, causing either a narrow or partial blockage through foods moving pathway. The main symptoms that will occur after eating will be nausea and vomiting. Remember, to notify your primary care doctor of all gastrointestinal symptoms – when they occur and how long they lasted.
