Sept 13th ~ Johnny Anderson

Sept 16th ~ Braxton O'neal

Sept 19th ~ Jimmie Howard

Sept 28th ~ Clearance Webster

Sept 29th ~ Sharon Wiggins

Sept 29th ~ Brian Mazyck

Sending our heartfelt condolences to Bro Paul Coleman and his family on the passing of his beloved wife. Her Homegoing Service was held on September 19th.

As the days continue and the quiet moments settle in, may God surround Bro. Coleman and his family with comfort, strength, peace, and the loving memories that will forever remain in their hearts.

Please continue to keep the Coleman family lifted in your thoughts and prayers during this season of bereavement. May they feel the love of their church family surrounding them.

DID THE DEVIL REALLY
STEAL YOUR JOY OR DID
YOU TELL HIM HE COULD
HOLD IT UNTIL GOD LET
YOU HAVE YOUR WAY?

Thank You

We are glad you joined us today. We pray that you will experience God's presence as we share the wisdom found in HIS WORD.

This is the day the LORD
has made. We will rejoice
and be glad in it.

Psalm 118:24

September 27, 2026

Stress is a natural human reaction. Whenever, you experience changes or challenges your body produces physical and mental responses. Stress affect nearly every system in your body. It enhance how individuals feel and behave. **GOOD TO KNOW:** Stress can be a normal reaction to every day pressures, but it may become unhealthy if it disrupt daily functioning. Stress can cause sickness, such as eczema, weight gain, nausea and weaken the immune system. Believe it or not – stress isn’t all bad. In fact, acute (short acting) stress helps protect us by making us more alert to unwanted danger.

Whenever, you start feeling stressed your body will produce high levels of the stress hormone cortisol. However, cortisol decrease your immunity by limiting inflammation. But, when the body has chronic (long acting) stress, it will have too much cortisol in the blood. Chronic stress decreases the amount of white blood cells, that helps fight off infections. The lower your white blood cells levels, the higher your risk for contacting viruses, including the common cold and cold sores. As a result, your immune system starts feeling weaker and it can’t fight infections or diseases effectively. Symptoms: includes stomach pains, chest tightness and difficult breathing. **GOOD TO KNOW:** Stress hormones cause the heart to beat faster, pumping out large amounts of blood. When this happens, you have a serious problem. Immediately, the body correct this problem before it get out of control. By narrowing blood vessels but causing high blood pressure. **REMEMBER:** Everyone is different, when stress goes away all blood pressures may not return back to normal.
